

**The plans below show the site of an airport now and how it will look after redevelopment next year.**

The given maps demonstrate the setting and appearance of Southwest Airport currently and after refurbishment.

It is noticeable that a lot of modifications can be observed during rebuilding.

According to the current map, the check-in section is located on the left corner of departures and the café is situated in front of it. In the northern part of the sections of security passport control and passport control customs, there are eight gates and two walkways.

Looking more closely at the map of future development of the airport, a lot of modifications can be observed. The location of the cafe and restaurant will be changed and they will be located opposite each other. A new section named bag drop will be built next to the security passport control and will be placed instead of the check-in section. In arrivals section, another café will be constructed and an ATM will be added to this place. After rebuilding the airport, a new place will be constructed on the right corner of arrival section named car hire. Shops will be built at the top of the security passport control section and walkway will be replaced by sky train. The number of gates after refurbishment will be increased significantly to 18, which is ten more than the present time.
