

The two given illustrations depict data about the current plot of an airport, and its layout after renovation next year.

As an overall trend, it is apparent from the information supplied that the Southwest airport would undergo a relative development with growth in amenities expansion in the area of the airport.

Focusing on the present-day map, in the South part of the airport, there is an entrance for arrivals on the right side. Next to this, there is an exit door for departures with two separate halls for both of them. A security passport control section is located on the north side of the departures hall near a cafe and a check-in section. Similarly, there is a passport control costumes part on the north side of the other aisle. In addition, there is a vacant part in the vicinity of the above-mentioned areas that a square space is located in the neighborhood of this part where two walkaways for passengers are constructed there. Moreover, there are eight gates around this square zone.

Moving on the predictions, it can be seen that the gates section will be extended to the Y-shape area with eighteen separate gates, and two sky trains will be replaced by walkways. To the north side of the security passport control zone, in an empty plot, shops will be constructed. Although the old halls will be remained unchanged, a new café, an ATM, and a car hire will be built in arrivals hall as well as a check-in section, a bag drop part being replaced by the old check-in, and a new café being relocated will be constructed.
