

The two maps illustrate the plan of an airport at the present and its final design after applying some enhancements in the following year.

Overall, it can be seen that there will be a considerable increase in provision of transport facilities and welfare services, utilizing empty spaces or extra lands to apply them.

A major alteration is going to make in both departure and arrival lounges by which the number of their entrance will double. In addition, the departure section will equip with bag drop facility, alongside two other available ones, as well passengers in arrival part will provided with café, ATM, and car hire equipment for the first time in the history of the airport. Moreover, some shop stores are going to launch to give travelers the opportunity of purchasing for their requirements or some souvenirs.

The other significant development would be the growth in the number of gates which will be swelled to 18. To accommodate these gates, more grounds are adopt to construct and locate them. In order to facilitate commuting between gates and reach a specific one, sky train will replace walkway.
