

Depicted are two maps illustrating the current design of an airport and the proposed modification to develop it.

Overall perspective, the initial impression from the maps reveals that the majority of developments will be concerning the expansion of the numbers of gates and appending of several new amenities to the airport.

Look at the changes in more detail, although no alternation will be planned about the relocation of the departure and arrival entrance, additional doors will be going to install. Besides, as the planned development design illustrates, the check-in will be shifted from the left side of the departure space to the opposite side in favor of establishing a new room for a bag drop area, where the café will be repositioned to the south side of the bag drop. Furthermore, there are plans to construct a café, an ATM, and a car hire that necessities expanding the size of arrival space.

Regarding the upper side of the airport, meanwhile, security, passport control, and customs will witness no alternations, shops will be erected upper side of the security section for departure. Further changes which are worth mentioning are the conversion of a walkway into a long sky train as well as building two new paths with almost doubled gates, reaching from 8 to 18 after renovation.
