

The diagrams illustrate how the place of Southwest airport will be developed after one year. In general, significant modifications can be observed during the forecast development.

As can be seen, in the current map, there is not any facility in the arrival hall, but there is a café and check-in in the departure hall, where the check-in zone is located in the upper left-hand corner.

A bag drop zone will replace the check-in zone, which will be relocated to the opposite side. The cafe's place will be changed to the left corner of the entrance, next to the bag drop zone. Also, departure and arrival locations will remain the same while the number of doors will be increased twice.

There will be an expansion in the arrival hall area, with a car hire zone being established in this new area. On the same side of the car hire zone, a cafe and an ATM zone will be added. The number of boarding gates will rise from 8 to 18 gates. A walkway is replaced by a Skytrain, which will allow people to transport to different gates.
