

Given are two maps show variations which will be happened till next year in southwest airport. There will be several development during this year which will lead to the emergence of more facilities, and better infrastructures.

Security, passport control, and customs are the parts, which will remain unchanged, while the check-in part in the left side of departures will move to the right, and a bag drop will be constructed instead of it. Café located in the northeast of departures is going to be in the southwest of it, and also, a new café will be established in the north east of arrivals. In this segment, also, new facilities, including ATM and car hire will be constructed in the right side under café, and southeast corner, respectively.

Furthermore, the number of doors of arrivals and departures flight area will double until next year. Likewise, the number of gates situated on the north of airport, which are eight will increase by 10, and their shape will modify from a simple-squared shape to a triangle one. The walkway positioned near the left gates, on the other hand, will disappear and a sky train will be constructed in the approximate same region, bigger in size compared to walkway.

Overall, the comparison of the two maps reveals a major change from quiet airport to a thriving commercial area in the next year.
