

The two side-by-side diagrams illustrate the area of an airport after and before the prospective modifications and expansions.

Overall, it is predicted that the Southwest airport will welcome more passengers and make their arrival and departure more convenient by installing a car hire, a bag drop center, and also building more gates and passageways.

It is noticeable that the airport is planning on modernizing the place by substituting the walkway with a sky train and installing an ATM near the café. It is also suggested that in order to increase the number of passengers, have more flights, and cover more possible destinations, two new gates be opened beside the main doors of the complex and ten more stations be built at the end part of the facility.

Although the shops are now diminished to open up travelers' ways, one new coffee shop will be constructed near the departures gate to provide people with what they need. Also, due to the demand of newcomers and travelers, it is suggested to install one car hire department near the arrival gates.
