

The diagrams illustrate how the airport which is located in the southwest is planned to develop in next year.

Overall, there are plans for changing in some areas, namely recreational, transport, commercial and financial facilities, whereas in security facilities will remain unchanged.

Presently, there are 8 Gates from 1 to 8 which is located in the north. The Passenger for moving among these gates uses walkways. There is a security passport control in the left of the middle airport and a passport control customs is the opposite. Also in the departure area, a check-in area is located west of it and there is a café in the east of this area. There is an entrance for departure and arrivals in the south of the Airport.

There are plans to develop in the number of gates and are going to increase at 18 (from 1 to 18). The walkway is going to be diminished and replaced with a sky train in the middle space of the gates. There will be built a shop in West of the airport which is going to be sited in North of departure area and after security passport control area. There are plans to construct a bag drop and relocate the café to the southwest. The check-in area will move to the west of the departure area. In addition, there is a plan to increase the number of entrances in the departure and arrivals area from 1 to 2.
