

The two plans of an airport give information about the site currently and after development next year. The initial impression is that the developmental plan will be the expansion of the airport, and they have a plan to develop facilities as well as amenities.

As can be seen, the most noticeable change will happen in adding more gates from 8 gates to 18 gates next year. As a result, they have to replace the walking way with a new modern SkyTrain, so not only does SkyTrain make communication faster, but it also lets people easily have access to different gates.

Regarding new facilities, the location of the cafe will be changed from northeast to southwest in the departures section also they will add another cafe to the arrivals section. The check-in section will be on the right side of the departures after development. Moreover, in the developed plan, there will be a new bag drop in the departures section. Finally adding more facilities such as car hire in arrivals as well as ATM for passengers.
