

The two maps illustrate the position of an airport which is planned to improve next year.

Overall, it is clear that, while some facilities, namely security passport control, passport control customs and some gates will remain stable, a number of facilities or a piece of equipment, namely car hire, ATM, bag drop, café, some gates and shops will be added to the airport site to improve the quality of the airport area.

Looking at the information in more detail, two great developments of the site of an airport are that, although there are eight gates, there will be added ten gates to the area, besides due to this development, they also want to replace walkway with sky train, so passengers can commute between gates quickly and easily in the future. In addition, not only does the current café will be moved to the southwest of the airport, but also it is planned to build a new café on another side of the area.

As can be seen, now, passengers cannot access the taxi for commuting between the airport place and another place, but the station of car hire will be built as soon as possible. Moreover, they will add a new entrance for the departures part; likewise, they will establish a new door for the arrivals part. Finally, there will be an ATM machine in the airport place next year.
